

The TAIYO YUDEN Group's business activities center on the development, manufacture, and sales of electronic components.

Business	Main products
<p>Capacitors</p> <p>Capacitors are used in a wide variety of electronic equipment to temporarily store electricity and remove electronic noise. TAIYO YUDEN excels in producing small, high-capacitance multilayer ceramic capacitors, which are best suited to cutting-edge compact, ultrathin digital devices. Large numbers of smartphones, tablet devices, and other devices use these products.</p>	<p>Multilayer ceramic capacitors</p> 
<p>Ferrite and Applied Products</p> <p>The main products of the Ferrite and Applied Products segment are inductors used in electronic equipment power and high-frequency circuits for blocking alternating current while allowing direct current to pass through.</p>	<p>Wire-wound chip inductors, multilayer chip inductors, ferrite bead inductors, common-mode choke coils</p> 
<p>Integrated Modules & Devices</p> <p>The Integrated Modules & Devices segment's main products are FBAR/SAW devices for mobile communications, frontend modules, and power supply modules. The FBAR/SAW devices are used primarily in smartphones to enable high-speed data communications and high-quality voice communications.</p>	<p>FBAR/SAW devices for mobile communications, power supply modules, high-frequency modules, embedded-parts multilayer wiring substrates</p> 
<p>Other Electronic Components</p> <p>The Other Electronic Components segment develops and brings to market a variety of energy devices used as backup power equipment for smart meters and other similar products, and peak current assistance for LED flashes.</p>	<p>Lithium ion capacitors, polyacene capacitors</p>
