

Large-Capacity and High-Speed Communication Infrastructure Support RF Devices

Overview

- Provides solutions for 5G with various technologies (FBAR, SAW, LTCC)
- Contributes to solving social issues through resource and energy efficient manufacturing

Advantages

- Unique miniaturization technology significantly reduces resource and energy consumption
- World's smallest and thinnest products which support all applications

Applications

Contributing to the sustainable society with the industry leading miniaturization technology

Wearable Devices

Health management and remote medical care through wireless communications
Promotes healthy lifestyles and welfare

Drones

Manpower saving in logistics, agriculture, surveying, etc.
Realizes a highly efficient and sustainable society

Telematics

Prevents accidents and theft through mutual communications
Contributes to the creation of a safe and secure community
