

Notice for TAIYO YUDEN Products

Please read this notice before using the TAIYO YUDEN products.

? REMINDERS

Product Information in this Catalog

Product information in this catalog is as of March 2023. All of the contents specified herein and production status of the products listed in this catalog are subject to change without notice due to technical improvement of our products, etc. Therefore, please check for the latest information carefully before practical application or use of our products.

Please note that TAIYO YUDEN shall not be in any way responsible for any damages and defects in products or equipment incorporating our products, which are caused under the conditions other than those specified in this catalog or individual product specification sheets.

Approval of Product Specifications

Please contact TAIYO YUDEN for further details of product specifications as the individual product specification sheets are available. When using our products, please be sure to approve our product specifications or make a written agreement on the product specification with TAIYO YUDEN in advance.

Pre-Evaluation in the Actual Equipment and Conditions

Please conduct validation and verification of our products in actual conditions of mounting and operating environment before using our products.

Limited Application

1. Equipment Intended for Use

The products listed in this catalog are intended for general-purpose and standard use in general electronic equipment for consumer (e.g., AV equipment, OA equipment, home electric appliances, office equipment, information and communication equipment including, without limitation, mobile phone, and PC) and other equipment specified in this catalog or the individual product specification sheets, or the equipment approved separately by TAIYO YUDEN.

TAIYO YUDEN has the product series intended for use in the following equipment. Therefore, when using our products for these equipment, please check available applications specified in this catalog or the individual product specification sheets and use the corresponding products.

Application	Product Series	Quality Grade*3	
Application	Equipment *1	Category (Part Number Code *2)	Quality Grade 9
Automotive	Automotive Electronic Equipment (POWERTRAIN, SAFETY)	А	1
Adiomotive	Automotive Electronic Equipment (BODY & CHASSIS, INFOTAINMENT)	С	2
Industrial	Telecommunications Infrastructure and Industrial Equipment	В	2
Medical	Medical Devices classified as GHTF Class C (Japan Class III)	M	2
iviedicai	Medical Devices classified as GHTF Classes A or B (Japan Classes I or II)	L	3
Consumer	General Electronic Equipment	S	3
Consumer	Only for Mobile Devices *4	E	4

^{*}Notes:1. Based on the general specifications required for electronic components for such equipment, which are recognized by TAIYO YUDEN, the use of each product series for the equipment is recommended. Please be sure to contact TAIYO YUDEN before using our products for equipment other than those covered by the product series.

^{2.} On each of our part number, the 2nd code from the left is a code indicating the "Category" as shown in the above table. For details, please check the explanatory materials regarding the part numbering system of each of our products.

^{3.} Each product series is assigned a "Quality Grade" from 1 to 4 in order of higher quality. Please do not incorporate a product into any equipment with a higher Quality Grade than the Quality Grade of such product without the prior written consent of TAIYO YUDEN.

^{4.} The applications covered by this product series are limited to mobile devices (smartphone, tablet PC, smartwatch, handheld game console, etc.) among general electronic equipment for consumer. The design, specifications and operating environment, etc. differ from those of the product series for "General Electronic Equipment" (Category: S), so please check the individual product specification sheets for details. The product series for "General Electronic Equipment" (Category: S) can also be used for mobile devices.

[▶] This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our product specification sheets. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our website (http://www.ty-top.com/).

2. Equipment Requiring Inquiry

Please be sure to contact TAIYO YUDEN for further information before using the products listed in this catalog for the following equipment (excluding intended equipment as specified in this catalog or the individual product specification sheets) which may cause loss of human life, bodily injury, serious property damage and/or serious public impact due to a failure or defect of the products and/or malfunction attributed thereto.

- (1) Transportation equipment (automotive powertrain control system, train control system, and ship control system, etc.)
- (2) Traffic signal equipment
- (3) Disaster prevention equipment, crime prevention equipment
- (4) Medical devices classified as GHTF Class C (Japan Class III)
- (5) Highly public information network equipment, data-processing equipment (telephone exchange, and base station, etc.)
- (6) Any other equipment requiring high levels of quality and/or reliability equal to the equipment listed above

3. Equipment Prohibited for Use

Please do not incorporate our products into the following equipment requiring extremely high levels of safety and/or reliability.

- (1) Aerospace equipment (artificial satellite, rocket, etc.)
- (2) Aviation equipment *1
- (3) Medical devices classified as GHTF Class D (Japan Class IV), implantable medical devices *2
- (4) Power generation control equipment (nuclear power, hydroelectric power, thermal power plant control system, etc.)
- (5) Undersea equipment (submarine repeating equipment, etc.)
- (6) Military equipment
- (7) Any other equipment requiring extremely high levels of safety and/or reliability equal to the equipment listed above
- *Notes:1. There is a possibility that our products can be used only for aviation equipment that does not directly affect the safe operation of aircraft (e.g., in-flight entertainment, cabin light, electric seat, cooking equipment) if such use meets requirements specified separately by TAIYO YUDEN. Please be sure to contact TAIYO YUDEN for further information before using our products for such aviation equipment.
 - 2. Implantable medical devices contain not only internal unit which is implanted in a body, but also external unit which is connected to the internal unit.

4. Limitation of Liability

Please note that unless you obtain prior written consent of TAIYO YUDEN, TAIYO YUDEN shall not be in any way responsible for any damages incurred by you or third parties arising from use of the products listed in this catalog for any equipment that is not intended for use by TAIYO YUDEN, or any equipment requiring inquiry to TAIYO YUDEN or prohibited for use by TAIYO YUDEN as described above.

Safety Design

When using our products for high safety and/or reliability-required equipment or circuits, please fully perform safety and/or reliability evaluation. In addition, please install (i) systems equipped with a protection circuit and a protection device and/or (ii) systems equipped with a redundant circuit or other system to prevent an unsafe status in the event of a single fault for a failsafe design to ensure safety.

Intellectual Property Rights

Information contained in this catalog is intended to convey examples of typical performances and/or applications of our products and is not intended to make any warranty with respect to the intellectual property rights or any other related rights of TAIYO YUDEN or any third parties nor grant any license under such rights.

Limited Warranty

Please note that the scope of warranty for our products is limited to the delivered our products themselves conforming to the product specifications specified in the individual product specification sheets, and TAIYO YUDEN shall not be in any way responsible for any damages resulting from a failure or defect in our products. Notwithstanding the foregoing, if there is a written agreement (e.g., supply and purchase agreement, quality assurance agreement) signed by TAIYO YUDEN and your company, TAIYO YUDEN will warrant our products in accordance with such agreement, provided, however, that our products shall be used for general-purpose and standard use in the equipment specified in this catalog or the individual product specification sheets.

■ TAIYO YUDEN's Official Sales Channel

The contents of this catalog are applicable to our products which are purchased from our sales offices or authorized distributors (hereinafter "TAIYO YUDEN's official sales channel"). Please note that the contents of this catalog are not applicable to our products purchased from any seller other than TAIYO YUDEN's official sales channel.

Caution for Export

Some of our products listed in this catalog may require specific procedures for export according to "U.S. Export Administration Regulations", "Foreign Exchange and Foreign Trade Control Law" of Japan, and other applicable regulations. Should you have any questions on this matter, please contact our sales staff.

[▶] This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our product specification sheets. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our website (http://www.ty-top.com/).

Industrial Application Guide

We have the product series (the 2nd code from the left side of the part number is "B") intended for use in telecommunications infrastructure and industrial equipment (its typical examples are as shown in the table below). Therefore, when using our products for these equipment, please check it carefully by referring to the part number or the individual product specification sheets and use the corresponding product series. Should you have any questions on this matter, please contact us.

Product Series (The 2nd Code from the Left Side of the Part Number)	Category	Telecommunications Infrastructure and Industrial Equipment (Typical Example)
	Telecommunications Infrastructure	 Base Station Optical Transceiver Router/Switch (Carrier-Grade) UPS (Uninterruptible Power Supply), etc.
	Factory Automation	PLC (Programmable Logic Controller) Servomotor/Servo Driver Industry Robot, etc.
В	Measurement	 Gas Meter Water Meter Flow Meter Pressure Gauge Meter Magnetometer Thermometer, etc.
	Electric Power Apparatus	Power Conditioner (Solar Power System) Smart Meter GFCI (Ground Fault Circuit Interrupter) Electric Vehicle Charging Station, etc.

[▶] This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our product specification sheets. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our website (http://www.ty-top.com/).

For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

9. Deflection Temperature Compensating (High Frequency type) Appearance : No abnormality Capacitance change :±5% or ±0.5pF, whichever is larger. Specified Value High permittivity : No abnormality Appearance Capacitance change : Within $\pm 10\%$ Warp : 1mm (Soft Termination type:3mm) Duration : 10sec. Test board : Glass epoxy-resin substrate Test Methods Thickness : 1.6mm and Remarks

Capacitance measurement shall be conducted with the board bent.

10. Adhesive Strength of Terminal Electrodes Specified Value No terminal separation or its indication. Test Methods and Remarks Duration : 30±5sec. (Soft Termination type: 10±1sec)

(Unit: mm)

11. Vibration		
Specified Value	Initial performance shal	l be satisfied.
Test Methods and Remarks	Preconditioning Frequency range Overall amplitude Sweeping method	: Thermal treatment (at 150°C for 1hr) Note1 (Only High permittivity) : 10 to 55 Hz : 1.5 mm : 10 to 55 to 10 Hz for 1 min Two hours each in X, Y, Z directions: 6 hrs in total

12. Solderability			
Specified Value	At least 95% of terminal elect	rode is covered by new solder	
		Eutectic solder	Lead-free solder
Test Methods	Solder type	H60A or H63A	Sn-3.0Ag-0.5Cu
and Remarks	Solder temperature	230±5°C	245±3°C
	Duration	4±1	sec.

	Temperature Compens	ating (High Frequency type)
	Appearance	: No abnormality
	Capacitance change	: Within $\pm 2.5\%$ or ± 0.25 pF, whichever is larger.
	Insulation resistance	: Initial value
	Withstanding voltage	(between terminals): No abnormality
Specified Value	High permittivity	
	Appearance	: No abnormality
	Capacitance change	: Within $\pm 15\%$ (H), $\pm 10\%$ (Q, S)
	Dissipation factor	: Initial value
	Insulation resistance	: Initial value
	Withstanding voltage	(between terminals): No abnormality
	Preconditioning	: Thermal treatment(at 150°C for 1hr) Note1 (Only High permittivity)
Test Methods and Remarks	Solder temperature	: 270±5℃
	Duration	: 3±0.5sec.
anu nemarks	Preheating conditions	: 80 to 100°C, 2 to 5 min. 150 to 200°C, 2 to 5 min.
	Recovery	: 24±2hrs under the standard condition Note3

Specified Value

High permittivity

Preconditioning

Insulation resistance

: No abnormality Appearance Capacitance change : Within ± 15%

: 7%max(H), 5%max(Q, S). Dissipation factor

: $10 \mathrm{M}\,\Omega$ μ F or $500 \mathrm{M}\,\Omega$, whichever is smaller. Insulation resistance

: $500M\Omega$ min

Test Methods and Remarks

Temperature : 60±2°C Humidity : 90 to 95%RH Duration :500 +24/-0 hrsApplied voltage : Rated voltage

Charge/discharge current : 50mA max.

: 24 ± 2hrs under the standard condition Note3 Recovery

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/)

17. High Tempera	Temperature Compensating	(High Evaguanay tuna)		
	Appearance Capacitance change	: No abnormality		
	Insulation resistance	: Within $\pm 3\%$ or ± 0.3 pF, whichever is larger. :1000M Ω min		
Specified Value	High permittivity			
	Appearance	: No abnormality		
	Capacitance change	: Within±15%		
	Dissipation factor	: 7%max(H), 5%max(Q, S).		
	Insulation resistance	: 50M Ω μ F or 1000M Ω , whichever is smaller.		
	Preconditioning	: Voltage treatment Note2 (Only High permittivity)		
	Temperature	: Maximum operating temperature		
Test Methods	Duration	: 1000 + 24/-0 hrs		
and Remarks	Applied voltage	: Rated voltage × 2(H, Q(High frequency / low loss type))		
and Nemarks		Rated voltage \times 1.5(Q(Excluding High frequency / low loss type)), Rated voltage \times 1.2(S)		
	Charge/discharge current	: 50mA max.		
	Recovery	: 24±2hrs under the standard condition Note3		
Note1 Thermal tr		measured after test sample is heat-treated at $150+0/-10^{\circ}\text{C}$ for an hour and kept at room temperature		
	for 24 ± 2 hours.			
Note2 Voltage tro		measured after test sample is voltage-treated for an hour at both the temperature and voltage specified in and kept at room temperature for 24±2hours.		
Note3 Standard	condition : Temperature: 5 to 3	5°C, Relative humidity: 45 to 85 % RH, Air pressure: 86 to 106kPa		
	When there are quest under the following of	stions concerning measurement results, in order to provide correlation data, the test shall be conducted condition.		
	Temperature: 20±2	°C, Relative humidity: 60 to 70 % RH, Air pressure: 86 to 106kPa		
	Unless otherwise sp	ecified, all the tests are conducted under the "standard condition".		

PRECAUTIONS

1. Circuit Design

- ◆Verification of operating environment, electrical rating and performance
 - 1. A malfunction of equipment in fields such as medical, aerospace, nuclear control, etc. may cause serious harm to human life or have severe social ramifications

Therefore, any capacitors to be used in such equipment may require higher safety and reliability, and shall be clearly differentiated from them used in general purpose applications.

Precautions

- ◆Operating Voltage (Verification of Rated voltage)
 - 1. The operating voltage for capacitors must always be their rated voltage or less.
 - If an AC voltage is loaded on a DC voltage, the sum of the two peak voltages shall be the rated voltage or less.
 - For a circuit where an AC or a pulse voltage may be used, the sum of their peak voltages shall also be the rated voltage or less.

 2. Even if an applied voltage is the rated voltage or less reliability of capacitors may be deteriorated in case that either a high frequency
 - 2. Even if an applied voltage is the rated voltage or less reliability of capacitors may be deteriorated in case that either a high frequence AC voltage or a pulse voltage having rapid rise time is used in a circuit.

2. PCB Design

Precautions

- ◆Pattern configurations (Design of Land-patterns)
 - 1. When capacitors are mounted on PCBs, the amount of solder used (size of fillet) can directly affect the capacitor performance. Therefore, the following items must be carefully considered in the design of land patterns:
 - (1) Excessive solder applied can cause mechanical stresses which lead to chip breaking or cracking. Therefore, please consider appropriate land-patterns for proper amount of solder.
 - (2) When more than one component are jointly soldered onto the same land, each component's soldering point shall be separated by solder-resist.
- ◆Pattern configurations (Capacitor layout on PCBs)

After capacitors are mounted on boards, they can be subjected to mechanical stresses in subsequent manufacturing processes (PCB cutting, board inspection, mounting of additional parts, assembly into the chassis, wave soldering of the boards, etc.). For this reason, land pattern configurations and positions of capacitors shall be carefully considered to minimize stresses.

◆Pattern configurations (Design of Land-patterns)

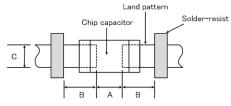

The following diagrams and tables show some examples of recommended land patterns to prevent excessive solder amounts.

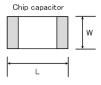

- (1) Recommended land dimensions for typical chip capacitors
- Multilayer Ceramic Capacitors : Recommended land dimensions (unit: mm)

)	0.9~1.1	1.5~1.7	1.9~2.1	

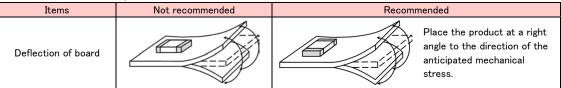

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

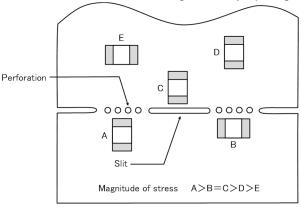

(2) Examples of good and bad solder application

- ◆Pattern configurations (Capacitor layout on PCBs)
 - 1-1. The following is examples of good and bad capacitor layouts; capacitors shall be located to minimize any possible mechanical stresses from board warp or deflection.

1-2. The amount of mechanical stresses given will vary depending on capacitor layout. Please refer to diagram below.

1-3. When PCB is split, the amount of mechanical stress on the capacitors can vary according to the method used. The following methods are listed in order from least stressful to most stressful: push-back, slit, V-grooving, and perforation. Thus, please consider the PCB, split methods as well as chip location.

3. Mounting

- ◆Adjustment of mounting machine
 - 1. When capacitors are mounted on PCB, excessive impact load shall not be imposed on them.
 - 2. Maintenance and inspection of mounting machines shall be conducted periodically.

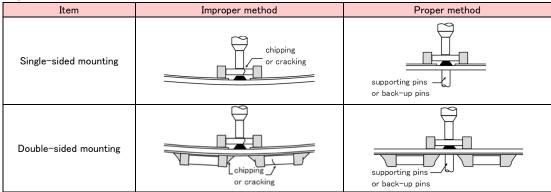

Precautions

- ◆Selection of Adhesives
 - 1. When chips are attached on PCBs with adhesives prior to soldering, it may cause capacitor characteristics degradation unless the following factors are appropriately checked: size of land patterns, type of adhesive, amount applied, hardening temperature and hardening period. Therefore, please contact us for further information.

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

◆Adjustment of mounting machine

- 1. When the bottom dead center of a pick-up nozzle is too low, excessive force is imposed on capacitors and causes damages. To avoid this, the following points shall be considerable.
 - (1) The bottom dead center of the pick-up nozzle shall be adjusted to the surface level of PCB without the board deflection.
 - (2) The pressure of nozzle shall be adjusted between 1 and 3 N static loads.
 - (3) To reduce the amount of deflection of the board caused by impact of the pick-up nozzle, supporting pins or back-up pins shall be used on the other side of the PCB. The following diagrams show some typical examples of good and bad pick-up nozzle placement:

Technical considerations

2. As the alignment pin is worn out, adjustment of the nozzle height can cause chipping or cracking of capacitors because of mechanical impact on the capacitors.

To avoid this, the monitoring of the width between the alignment pins in the stopped position, maintenance, check and replacement of the pin shall be conducted periodically.

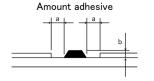

◆Selection of Adhesives

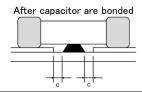

Some adhesives may cause IR deterioration. The different shrinkage percentage of between the adhesive and the capacitors may result in stresses on the capacitors and lead to cracking. Moreover, too little or too much adhesive applied to the board may adversely affect components. Therefore, the following precautions shall be noted in the application of adhesives.

- (1) Required adhesive characteristics
 - a. The adhesive shall be strong enough to hold parts on the board during the mounting & solder process.
 - b. The adhesive shall have sufficient strength at high temperatures.
 - c. The adhesive shall have good coating and thickness consistency.
 - d. The adhesive shall be used during its prescribed shelf life.
 - e. The adhesive shall harden rapidly.
 - f. The adhesive shall have corrosion resistance.
 - g. The adhesive shall have excellent insulation characteristics.
 - h. The adhesive shall have no emission of toxic gasses and no effect on the human body.
- (2) The recommended amount of adhesives is as follows;

[Recommended condition]

Figure	2012/3216 case sizes as examples	
а	0.3mm min	
b	100 to 120 μ m	
С	Adhesives shall not contact land	

4. Soldering

Precautions

Technical

considerations

◆Selection of Flu

Since flux may have a significant effect on the performance of capacitors, it is necessary to verify the following conditions prior to use;

- (1) Flux used shall be less than or equal to 0.1 wt%(in CI equivalent) of halogenated content. Flux having a strong acidity content shall not be applied.
- (2) When shall capacitors are soldered on boards, the amount of flux applied shall be controlled at the optimum level.
- (3) When water-soluble flux is used, special care shall be taken to properly clean the boards.

◆Soldering

Temperature, time, amount of solder, etc. shall be set in accordance with their recommended conditions.

Sn-Zn solder paste can adversely affect MLCC reliability.

Please contact us prior to usage of Sn-Zn solder.

◆Selection of Flux

1-1. When too much halogenated substance (Chlorine, etc.) content is used to activate flux, or highly acidic flux is used, it may lead to corrosion of terminal electrodes or degradation of insulation resistance on the surfaces of the capacitors.

- 1-2. Flux is used to increase solderability in wave soldering. However if too much flux is applied, a large amount of flux gas may be emitted and may adversely affect the solderability. To minimize the amount of flux applied, it is recommended to use a flux-bubbling system.
- 1-3. Since the residue of water-soluble flux is easily dissolved in moisture in the air, the residues on the surfaces of capacitors in high humidity conditions may cause a degradation of insulation resistance and reliability of the capacitors. Therefore, the cleaning methods

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

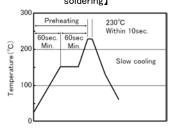

and the capability of the machines used shall also be considered carefully when water-soluble flux is used.

♦Soldering

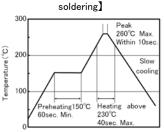

- · Ceramic chip capacitors are susceptible to thermal shock when exposed to rapid or concentrated heating or rapid cooling.
- · Therefore, the soldering must be conducted with great care so as to prevent malfunction of the components due to excessive thermal shock
- Preheating: Capacitors shall be preheated sufficiently, and the temperature difference between the capacitors and solder shall be within 130°C.
- · Cooling: The temperature difference between the capacitors and cleaning process shall not be greater than 100°C.

[Reflow soldering]

【Recommended conditions for eutectic soldering】

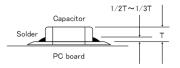

[Recommended condition for Pb-free

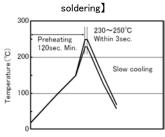

Caution

- ①The ideal condition is to have solder mass (fillet) controlled to 1/2 to 1/3 of the thickness of a capacitor.
- ②Because excessive dwell times can adversely affect solderability, soldering duration shall be kept as close to recommended times as possible, soldering for 2 times.

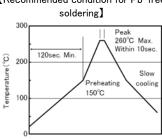

[Wave soldering]

[Recommended conditions for eutectic

[Recommended condition for Pb-free

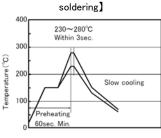

Caution

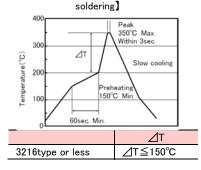

①Wave soldering must not be applied to capacitors designated as for reflow soldering only. soldering for 1 times.

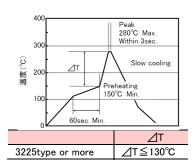

[Hand soldering]

[Recommended conditions for eutectic

[Recommended condition for Pb-free

Caution

- ①Use a 50W soldering iron with a maximum tip diameter of 1.0 mm.
- ②The soldering iron shall not directly touch capacitors. soldering for 1 times.

5. Cleaning ◆Cleaning conditions 1. When PCBs are cleaned after capacitors mounting, please select the appropriate cleaning solution in accordance with the intended use Precautions of the cleaning. (e.g. to remove soldering flux or other materials from the production process.) 2. Cleaning condition shall be determined after it is verified by using actual cleaning machine that the cleaning process does not affect capacitor's characteristics. 1. The use of inappropriate cleaning solutions can cause foreign substances such as flux residue to adhere to capacitors or deteriorate their outer coating, resulting in a degradation of the capacitor's electrical properties (especially insulation resistance). 2. Inappropriate cleaning conditions (insufficient or excessive cleaning) may adversely affect the performance of the capacitors. In the case of ultrasonic cleaning, too much power output can cause excessive vibration of PCBs which may lead to the cracking of Technical capacitors or the soldered portion, or decrease the terminal electrodes' strength. Therefore, the following conditions shall be carefully considerations checked; 20 W/l or les Ultrasonic output: Ultrasonic frequency: 40 kHz or less Ultrasonic washing period: 5 min. or less

6. Resin coating and mold 1. With some type of resins, decomposition gas or chemical reaction vapor may remain inside the resin during the hardening period or while left under normal storage conditions resulting in the deterioration of the capacitor's performance. Precautions 2. When a resin's hardening temperature is higher than capacitor's operating temperature, the stresses generated by the excessive heat may lead to damage or destruction of capacitors. The use of such resins, molding materials etc. is not recommended.

7. Handling	
Precautions	 ◆Splitting of PCB 1. When PCBs are split after components mounting, care shall be taken so as not to give any stresses of deflection or twisting to the board. 2. Board separation shall not be done manually, but by using the appropriate devices. ◆Mechanical considerations Be careful not to subject capacitors to excessive mechanical shocks. (1) If ceramic capacitors are dropped onto a floor or a hard surface, they shall not be used. (2) Please be careful that the mounted components do not come in contact with or bump against other boards or components.

	♦Storage				
	To maintain the solderability of terminal electrodes and to keep packaging materials in good condition, care must be taken to contro temperature and humidity in the storage area. Humidity should especially be kept as low as possible. Recommended conditions				
	Ambient temperature : Below 30°C Humidity : Below 70% RH				
Precautions	The ambient temperature must be kept below 40°C. Even under ideal storage conditions, solderability of capacitor is deteriorated as time passes, so capacitors shall be used within 6 months from the time of delivery.				
	•Ceramic chip capacitors shall be kept where no chlorine or sulfur exists in the air.				
	2. The capacitance values of high dielectric constant capacitors will gradually decrease with the passage of time, so care shall be taken to design circuits. Even if capacitance value decreases as time passes, it will get back to the initial value by a heat treatment at 150°C for 1hour.				
Technical considerations	If capacitors are stored in a high temperature and humidity environment, it might rapidly cause poor solderability due to terminal oxidation and quality loss of taping/packaging materials. For this reason, capacitors shall be used within 6 months from the time of delivery. If exceeding the above period, please check solderability before using the capacitors.				

Please check the guide regarding precautions for deflection test, soldering by spot heat, and so on.
